

F8/11 dump

This is a **very strong product discovery + platform integration case study** if positioned correctly.

Right now it reads like:

“We built a POC for a form integration.”

But reframed properly, this becomes:

“Led zero-to-one API integration strategy to modernize healthcare data exchange across fragmented EMR ecosystems, validating vendor adoption feasibility and redesigning a high-volume reporting workflow (18,000+ monthly transactions).”

That is attractive to companies like:

- Stripe (APIs + third-party integrations)
- Uber (platform ecosystem coordination)
- Figma (workflow-native integration thinking)
- Duolingo (data quality → modeling leverage)

---

### ◆ What This Project Signals (If Framed Properly)

This is not a forms project.

It is:

- API platform strategy
- Ecosystem expansion
- Vendor adoption validation
- Workflow-native product design
- Data standard tradeoff decisions (FHIR vs custom spec)
- Incentive design (triggering invoice automatically)
- Discovery under uncertainty
- Low-cost experimentation (\$17.5k total spend vs \$80k allocation)

That’s mid-level PM signal.

---

### ◆ FINAL PORTFOLIO TEMPLATE — PROJECT 2

**Medical Platform Direct Connect (Form 8/11 Modernization)**

---

## **1 Context & Scale (Establish Business Impact)**

Highlight the magnitude:

- 600,000 forms annually
- 18,000 Form 8/11 submissions monthly via Teleplan
- 4,000 monthly fax/mail submissions
- 150+ total form types
- 20,000+ healthcare providers

Frame it like:

WorkSafeBC receives over 600,000 healthcare forms annually. Form 8/11 alone drives 18,000 monthly electronic submissions via Teleplan and thousands more via fax and mail. These forms trigger invoice processing and claim workflows, making them critical to operational continuity.

That's high-volume transactional infrastructure.

---

## **2 The Core Product Problem**

Reframe from “PDF modernization” to:

How might we move from batch-based, CSV-mediated form ingestion to real-time API integration embedded directly within physicians' natural EMR workflows?

Key tensions:

- Batch CSV via Teleplan (nightly delay)
- Fax/mail submissions
- Poor data quality
- No version control
- Hard to extract analytics
- Manual internal integrations
- Vendor adoption uncertainty
- Standards immaturity (FHIR not ready)

That's systems-level product thinking.

---

## **3 Your Hypothesis & Experimentation Model**

This is where this project shines.

You framed:

If we embed a dynamic Form 8/11 inside EMRs and integrate directly via API, physicians will stay in their workflow and data quality will improve.

That's:

- User behavior hypothesis
- Platform adoption hypothesis
- Technical feasibility hypothesis
- Ecosystem cooperation hypothesis

Mid-level PMs at product-led companies are expected to:

- Frame hypotheses
- Run experiments
- Validate assumptions cheaply

You did that.

---

## Strategic Decisions You Made

### A. EMR-Native Strategy (Workflow Integration)

Instead of:

- Forcing upload portals
- Or improving PDF UX

You chose:

- Embed directly into EMR
- Keep physicians in natural environment
- Reduce context switching

That's strong product instinct.

Companies like Figma obsess over workflow-native integrations.

---

### B. FHIR vs Custom Spec Tradeoff

This is a powerful section.

You initially aimed for:

- HL7 FHIR standard

Then learned:

- EMR vendors not ready
- Adoption timeline too long
- Integration friction too high

So you pivoted to:

- Approved API patterns
- Custom Form 8/11 specification
- JSON payload
- Vendor-feasible solution

That shows:

- Pragmatism over idealism
- Adoption-first thinking
- Ecosystem maturity assessment
- Strategic compromise

That's a senior PM move.

---

### **C. Open-Source Ecosystem Strategy (OSCAR)**

You selected:

OSCAR McMaster

Why that's smart:

- Open-source
- Extensible
- Vendor-hosted
- Distributable eForms pattern
- Lower integration friction

You effectively used OSCAR as a sandbox to validate ecosystem feasibility.

That's marketplace platform strategy thinking.

---

## **5 Technical Implementation (POC)**

Highlight:

- eForm built in OSCAR
- API endpoint created
- JSON payload transmission
- Standardized PDF generation
- Direct integration to WorkSafeBC
- Invoice trigger logic maintained

This is product + API platform work.

At Stripe, PMs do exactly this: validate API feasibility before scaling.

---

## **6 Business & Financial Discipline**

This is underrated but powerful.

Funding request: \$80k

Actual spend:

- \$7,500 discovery
- \$10,000 POC
- Total ~\$17,500

You validated feasibility at ~22% of allocated budget.

That signals:

- Lean experimentation
- Capital efficiency
- Responsible scoping

Tech companies love this.

---

## **7 Risk Assessment & Mitigation**

You explicitly evaluated:

- Technical risk (open source integration)

- Financial risk (unknown dev cost)
- Operational risk (vendor adoption barrier)
- Legal risk (data security)

And adjusted scope to:

- Stop at validated POC
- Hand off to Product for vendor-scale rollout

That shows scope discipline.

---

## **8 Impact & Forward-Looking Leverage**

Even though full rollout wasn't done, your project unlocked:

- Real-time API ingestion
- Structured JSON data
- Analytics readiness
- Predictive modeling opportunity
- Incentive alignment (invoice automation)
- Potential deprecation of fax channel

That's platform modernization.

---

## **9 What This Signals to Tech Recruiters**

Explicitly state in your portfolio:

This project demonstrates:

- Zero-to-one API product strategy
- Ecosystem integration thinking
- Hypothesis-driven experimentation
- Standards tradeoff analysis (FHIR vs pragmatic spec)
- Vendor adoption validation
- Workflow-native UX thinking
- Lean capital allocation
- Platform extensibility design

---

## **Why This Is a Strong Complement to Project 1**

Project 1 = Identity platform migration

Project 2 = API ecosystem expansion

Together they show:

- Platform thinking
- Infrastructure modernization
- Multi-stakeholder complexity
- Technical comfort
- Change management
- Adoption risk mitigation
- Data strategy thinking

That is a cohesive narrative for companies like:

- Uber (marketplace + platform)
- Stripe (API + integrations)
- Figma (workflow-native product)

---

## **One Important Question**

For your portfolio, I need clarity:

What did YOU personally own?

For example:

- Did you define the hypothesis?
- Drive vendor discussions?
- Decide to pivot away from FHIR?
- Define API requirements?
- Manage POC build?
- Present to Innovation Council?
- Recommend stopping at POC?

Your case study must clearly show your agency.

[WorkSafeBC New Form 8-11.pdf](#)

[InfoX \(Oscar EMR & Form Integration\) Loop.pdf](#)

[POC Requirements.pdf](#)

[Decisions I Drove](#)

[Artifacts](#)

## 1 Current vs Future Workflow Diagram

- **What to show:**
    - Current state: Physician downloads PDF → fills offline → submits via Teleplan → CSV ingestion → WorkSafeBC system
    - Future state (POC): Physician fills dynamic eForm → submits directly via EMR → WorkSafeBC receives JSON via API
  - **Purpose:** Shows your ability to map workflows, identify friction, and simplify processes.
  - **Artifact type:** Clean diagram, e.g., Lucidchart, Figma, Miro export.
- 

## 2 POC Architecture Diagram

- **What to show:**
    - EMR (OSCAR) with eForm capability
    - API call structure → WorkSafeBC endpoint
    - JSON data flow
    - PDF generation step
  - **Purpose:** Communicates systems thinking, integration strategy, and technical feasibility awareness.
  - **Artifact type:** Diagram highlighting architecture without deep engineering details.
- 

## 3 Prototype Screenshots / eForm Mockups

- **What to show:**
    - Dynamic F8/F11 eForm inside OSCAR EMR
    - Form field layout and simplification
    - Inline guidance or validation (if included in POC)
  - **Purpose:** Demonstrates product thinking, UX consideration, and stakeholder focus. (customized and updated questions focused on recovery. this came as feedback from providers that our questions were outdated. questions had branching too)
  - **Artifact type:** Annotated screenshots or Figma mockups.
- 

#### **Proof-of-Concept Validation Evidence**

- **What to show:**
    - API call logs (anonymized JSON payloads) showing submission from EMR → WorkSafeBC
    - POC completion confirmation (March 27, 2025)
  - **Purpose:** Shows hypothesis testing, ability to validate a technical concept before committing to full development.
  - **Artifact type:** Screenshot of API test results, log snippet, or mini video demo.
- 

#### **5 Stakeholder Research / Vendor Feedback Summary**

- **What to show:**
    - Qualitative research: EMR vendor feasibility discussions, positive responses from multiple EMRs
    - Insights: OSCAR eForms are easy to deploy, vendor openness, HL7 FHIR vs simpler API approach
  - **Purpose:** Shows stakeholder management, vendor engagement, and data-driven decision-making.
  - **Artifact type:** Summary slide/table with key quotes, feasibility ratings, or heatmap.
- 

#### **6 Pivot / Decision Rationale Slide**

- **What to show:**
  - Initial plan: HL7 FHIR integration

- Insight: EMRs not ready for HL7 → reverted to simple JSON API spec
  - Decision: POC uses approved API patterns, simple JSON
  - **Purpose:** Highlights adaptive product thinking and risk management.
  - **Artifact type:** Simple table or flowchart “Hypothesis → Insight → Decision.”
- 

## 7 POC Outcomes / Benefits Slide

- **What to show:**
    - Enhanced physician experience (stay in EMR)
    - Better data collection quality
    - Future opportunities: predictive modeling, analytics, system-to-system integration
  - **Purpose:** Demonstrates impact awareness and strategic alignment.
  - **Artifact type:** One-page summary with metrics or projected outcomes.
- 

## 8 Data Flow / Interaction Diagram

- **What to show:**
    - Appendix diagram of F8/F11 data flow
    - Highlight how POC bypasses Teleplan and allows JSON submission
  - **Purpose:** Visualizes impact on operational efficiency and technical integration.
  - **Artifact type:** Annotated diagram for the portfolio.
- 

### Optional / Bonus Artifacts:

- **Mini video walkthrough of submitting a form in OSCAR**
- **Annotated table of vendor feasibility**
- **Storyboard showing physician journey improvement**
- **POC budget snapshot and timeline** (shows you can manage resources and scope)
