

Pis dump

1 Executive Summary (Now Stronger)

Product: My Provider Services (MPS) – Enhanced Invoice Submission

Scale: 725K annual invoice line items

Business Problem: \$463K annual transcription costs from paper/fax

Goal: Digitize paper/fax submission through UX redesign + targeted adoption strategy

Target Impact: \$200K annual cost reduction

My Role: Led product strategy, user segmentation, UX improvements, and partnered with marketing to drive digital adoption among 3,775 providers.

2 The Real Product Problem (Reframed)

This was not just a usability issue.

It was a **behavior change problem**.

Providers:

- Felt paper/fax was “easy enough”
- Did not perceive strong value in switching
- Were not convinced digital would save time

That’s critical.

At tech companies, PMs are judged on:

Can you change user behavior?

You absolutely did that here.

3 The Strategic Insight

Two segmentation discoveries:

1. 25 providers = 50% of paper volume
2. Remaining 3,775 providers = long tail of friction-driven paper users

You decided:

- High-volume users → system integration future solution
- Long-tail users → UX simplification + persuasion strategy

This is classic power-law segmentation thinking.

Very strong signal.

What You Built (Product Side)

UX improvements:

- Reduced 11-screen flow
- Inline editing
- Line duplication
- Bulk delete
- Fee code autofill
- Front-end validation
- Maintain line item order
- Multiple claims per submission

But now you position them differently:

Reduced cognitive and administrative burden for low–medium volume providers.

5 What You Owned Beyond Product (This Is New)

This is where the template changes most.

Adoption Strategy

Partnered with MarCom to design:

Phase 1:

- Awareness campaign (email + direct mail)
- Tutorial guides
- Updated website messaging
- Internal job aids

Phase 2:

- Call campaign to high-volume providers
- Ad placements
- eNews promotions

- Post-campaign reporting

This shows:

- Cross-functional influence
- Funnel thinking
- Lifecycle management
- Adoption metrics ownership

That's extremely valuable for tech PM roles.

Metrics You Now Emphasize

Instead of just UX metrics, add:

Adoption Metrics

- % conversion from paper/fax → MPS
- Quarterly conversion tracking
- Engagement rates (CTR, inquiries)

Financial Impact

- Target \$200K annual ELAN reduction
- \$1.57 per line item cost baseline

Satisfaction Metrics

- 10% improvement in provider satisfaction
- Internal HCO adoption rate (100% by Q2)

Now this reads like a growth initiative.

Resume Bullet (Stronger Version)

Here's how it changes:

Version – Strategic & Growth Focused

Led digitization initiative for 725K annual invoice line items, reducing reliance on \$463K paper transcription channel; identified power-law submission patterns (25 providers = 50% volume), pivoted roadmap to optimize UX for long-tail users, and partnered with marketing to drive digital adoption targeting \$200K annual cost savings.

Why This Is Particularly Strong for Each Company

Uber

- Marketplace migration (offline → digital behavior shift)
- Segmentation strategy
- Cost efficiency optimization

Figma

- Micro-UX improvement obsession
- Friction removal
- Product-led growth

Duolingo

- Behavior change
- Habit formation
- Communication + persuasion design

What Makes This Senior-Leaning

The strongest move wasn't building features.

It was recognizing:

UX improvements alone would not drive adoption.

Marketing + communication + internal enablement were required.

That's systems-level thinking.

The Template Adjustment Summary

Before marketing:

- Product optimization case study

After marketing:

- Digital transformation + growth + behavioral change case study

That is a meaningful upgrade.

[Decisions I drove](#)

[Artifacts](#)

[Budget and timeline information](#)

[Release planning](#)

- performance
- drop bulk upload
- focus on UX
- research and testing (Delayed launch by 1 month)
- going over budget for inline editing and sustainment

OK if we put Niraj/Shwetha/Madhu/Michael for 40% on for the 4 sprints they get back...

[image](#)

And account for you and I putting 1/4 hours on it until May...

[image](#)

We would need \$205k total (an extra \$55k).

That seems like a lot of time actually where we would get Inline Editing for sure... and bug fixes and some other optimizations...

My Recommendation

We plan for a hard stop at the end of June. We deploy in April, and we have trailing support for issues and optimizations into June. Khush and I can bill 1/4 time in April / May and 1/8 time in June.

[image](#)

[image](#)

The final cost being \$220k. So asking for **\$75k** would be enough (or your original **\$85k** makes sense with a little buffer)

GTM Plan snapshot

Segmentation & intervention strategy

adoption funnel

Create counts:

- Total Providers
- Digitally Eligible
- Digitally Enabled (accounts created)
- Activated (submitted ≥ 1 invoice)
- Fully Transitioned (0 paper invoices in 90 days)

Then create:

- Funnel chart (Excel has built-in funnel)

1 Power-Law Distribution Chart

Show:

- 6% of providers = 51% of paper invoices
- Highlight \$463K baseline

This is your “PM insight moment.”

4 Experimentation Plan (Even If Lightweight)

Show:

- Targeted outreach
- Nudges

- Training
- Tracking metrics

If you didn't run A/B tests, show how you would now.

SUCCESS METRICS

MPS usage before PIS

MPS usage before launch through marketing and HC OPs

MPS usage after launch

Start date - August 2025

End date - March 16 2026

Budget allocated - 500K

Saved - 50K
